

JAVA SNACKS – MEAT PIE

(Friday, April 3, 2026)

Instructions:

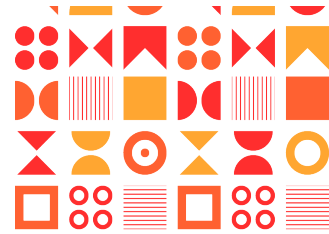

1. **Avoid using Artificial Intelligence(AI) tools.**
2. **Submission must occur EVERYDAY.**
3. **Each question is to be in a different file.**
4. **Each file is to be titled (Question 1 file should be titled TaskOne and so on)**
5. **For every day create a new folder in your local machine and save each file in the respective folders.**

Submission Guideline: I will assume you have created a repo called JavaTasks(or its equivalent).

I need a folder called **easterEggs. Inside this folder create the folder **meatPie** and save all of today's tasks inside it**

Push to git and paste the link to the repository on the provided Google Sheet document.

1. Write a program that prints a right-angle triangle of stars: row 1 has one star, row 2 has two, row 3 has three, row 4 has four.
2. Write a program that **asks** for your age and prints it.
3. Write a program that **takes** two numbers and prints their sum.
4. Write a program that **takes** two numbers and prints their difference.
5. Write a program that **takes** two numbers and prints their product.
6. Declare a variable counter. Use the **pre-increment** operator three times, printing the value of counter after each increment.
7. Write a program that **takes** a number and prints its square.
8. Write a program that **takes** a number and prints its cube.
9. Write a program that **asks** for a user's favorite color and prints it.
10. Write a program that **takes** a number and prints its double.

11. Write a program that **takes** a number and prints its half.
12. Write a program that **asks** for two numbers and prints both.
13. **Declare** a String variable called city, assign it any city name, and print: I live in [insert city].
14. Write a program that **asks** for three integers and prints their average.
15. Write a program that prints a box made of asterisks — 4 rows, each with 4 stars.
16. Write a program that **takes** a number and prints the number multiplied by 5.
17. Write a program that **takes** a number and prints the number plus 10.
18. Write a program that **takes** a number and prints the number minus 5.
19. Write a program that **takes** a number and prints its remainder when divided by 2.
20. Write a program that **asks** for length and width and prints area.
21. Write a program that **asks** for base and height and prints area of triangle.
22. Write a program that **takes** a radius and prints area of a circle.
23. Declare variable firstName and lastName. Print the full name using string concatenation. E.g **AdaLovelace** instead of Ada Lovelace
24. Write a program that asks for two numbers and swaps the two numbers.
25. Write a program that prints three blank lines between two messages: START and END.
26. Write a program that asks for a name and age and prints both in the format. I **am** (insert name) **and I am** (insert age) years old.
27. Declare int marks = 78. Cast it to a double and print both the original int and the cast double value.
28. Write a program that takes a number and prints the number divided by 3.
29. Write a program that prints the phrase: **She said, "Hello!"** — include the double quotes in the output.
30. Write a program that asks for two numbers and prints their sum and product.

Further Instructions:

Pay good attention to the expected format of the results.

Pay attention to the highlighted text. *Asks will mean I want to collect input from user. Takes means the engineer is giving a value*

Have fun guys!
