

JAVA SNACKS – MENSTRUAL APP

(Friday, May 1, 2026)

Instructions:

1. **Avoid using Artificial Intelligence(AI) tools.**
2. Submission must occur before class Saturday (12:00noon – Saturday, May 2, 2026).
3. You will demo the working prototype next week.

Submission Guideline: It is safe to assume you have created a repo called JavaTasks(or its equivalent).

Create a new folder **menstrualApp and save all of today's tasks inside it.**

Push to git and just push it. I will stroll by when I am ready.

A Big Boy caught his babe counting on the calendar and decided to ask her if she was expecting some money and she mentioned that she was calculating their safe period (Hhmmn !!!).

Your task is simple, I think

1. Help me research on the female menstrual cycle. Professor Tosin has helped with that.
2. Do me a small app like Uber that will enable her to calculate everything that has to do with her menstrual cycle ranging from flow date, through safe periods, Ovulation dates, etc.
3. Decide what inputs your app should receive and outputs your app will give out. All I just want is to go through your tests and understand how to use the app.

Please EPP a brother oh!!!

PS: This snack is not a group snack, DO NOT SHARE.

Enjoy your short weekend

Have fun guys!
