2. Submission must occur on or before 8:00am on Wednesday 13th May 2026.

Submission Guideline: Save it in our folder named **wahala** in the already existing **javaTasks** folder and save the files **OshoFreePromoEngine.java** **OshoFreePromoEngineTest.java**

Push to git. Send the link to me privately!

"Oshofree" — Lagos slang for getting something free. Labake Nigeria is running a promo: the more you spend, the bigger your discount. Your task is to build their discount engine.

Cart Total	Discount	Promo Code
Less than ₦5,000	0%	STARTER10 (not applicable below ₦5k)
₦5,000 – ₦14,999	10%	STARTER10
₦15,000 – ₦29,999	20%	BIGBOY20
₦30,000 and above	35%	OSHOFREE35

You will do this by writing a function that collects the cartTotal and the promoCode for each customer and returns the final price after applying the discount and doing necessary calculations. If the promo code is invalid, return the original cartTotal unchanged.

Sample Input 1:

The function receives 18000 and "BIGBOY20"

Explanation:

Expected Result: 14400

Explanation: ₦18,000 – 20% (₦3,600) = ₦14,400

Sample Input 2:

The function receives 18000 and "FAKE99"

Explanation:

Expected Result: 18000

Explanation: Invalid promo code — no discount applied
